

Right-sizing Power BI training

Three tiers, matched to how your employees actually use Power BI

Presented by Ramesh Balami

TIER 1

Report consumers

6–8 hours

TIER 2

Report creators

20–30 hours

TIER 3

Data and model builders

60 hours

Does every employee need 60 hours?

The real question is whether every employee needs that depth.

60

hours

The full curriculum

Most people in a company use Power BI in one of three ways.

They read dashboards

Managers and business users

They build reports

Analysts and power users working from existing datasets

They build and maintain datasets

BI developers and reporting analysts

60 hours only makes sense for the last group.

Three tiers, three depths

TIER 1

Report consumers

6–8

hours

Managers and business users who read dashboards

TIER 2

Report creators

20–30

hours

Business analysts and power users who build reports from existing datasets

TIER 3

Data and model builders

60

hours

BI developers and ML or reporting analysts who own datasets

TIER 1

Report consumers

6–8 hours

Managers and business users who read dashboards.

What they need

Navigation

Filtering and slicers

Drill-down

Exporting, subscriptions and alerts

How to read the visuals correctly

Skip modelling and DAX entirely.

Tier 2: Report creators

20–30 hours

Business analysts and power users who build their own reports from existing datasets.

What they need

- 1 Power Query basics
- 2 Simple relationships
- 3 Basic DAX measures
- 4 Choosing the right visual
- 5 Publishing and sharing in the Service

Coverage of the full curriculum

Module 1: Data Connect & Preparation

Included

Module 2: Data Model & DAX

Core topics only

Module 3: Visualisations

Included

Module 4: Maintenance & Security

Essentials only: publishing and sharing

Tier 3: Data and model builders

60

hours

BI developers and MI or reporting analysts who own the company's datasets.

Write advanced DAX

Own the datasets

Manage refresh

Set up security

The full 60-hour curriculum is built for this group.

What your team can do afterwards

TIER 1

Report consumers

Navigate the Power BI Service

Read and filter reports with confidence

Export, subscribe and set alerts

TIER 2

Report creators

Load and clean data

Build a simple data model and core measures

Design and publish interactive reports

TIER 3

Data and model builders

Write advanced DAX and tune performance

Manage refresh, gateways and workspaces

Set up row-level security and governance

Training that fits around real work

A schedule that suits you

Any day

Training runs in 2-hour sessions on weekdays, evenings or weekends. The full 60 hours works well over 6 to 8 weeks, with protected time agreed with managers so people can finish.

Weekdays

Evenings

Weekends

Labs on your own data

Own reports

Employees retain far more when exercises use their own sales, finance or operations reports than when they use a sample dataset.

Sales

Finance

Operations

Most employees will get there with Tier 2

If the goal is for employees to be well versed in Power BI, not certified, Tier 2 is enough for most of them. Reserve the full 60 hours for the few people who will build and maintain the company's datasets.

Packages

TIER 1

Consumer

8 hours

4 sessions of 2 hours

- ✓ Live walkthrough of the Power BI Service
- ✓ Hands-on practice with real reports
- ✓ End-of-course knowledge check

TIER 2

Best fit for most teams

Creator

24 hours

12 sessions of 2 hours

- ✓ Hands-on labs, ideally on your own data
- ✓ Progress tracking across the course
- ✓ Capstone report with review

TIER 3

Builder

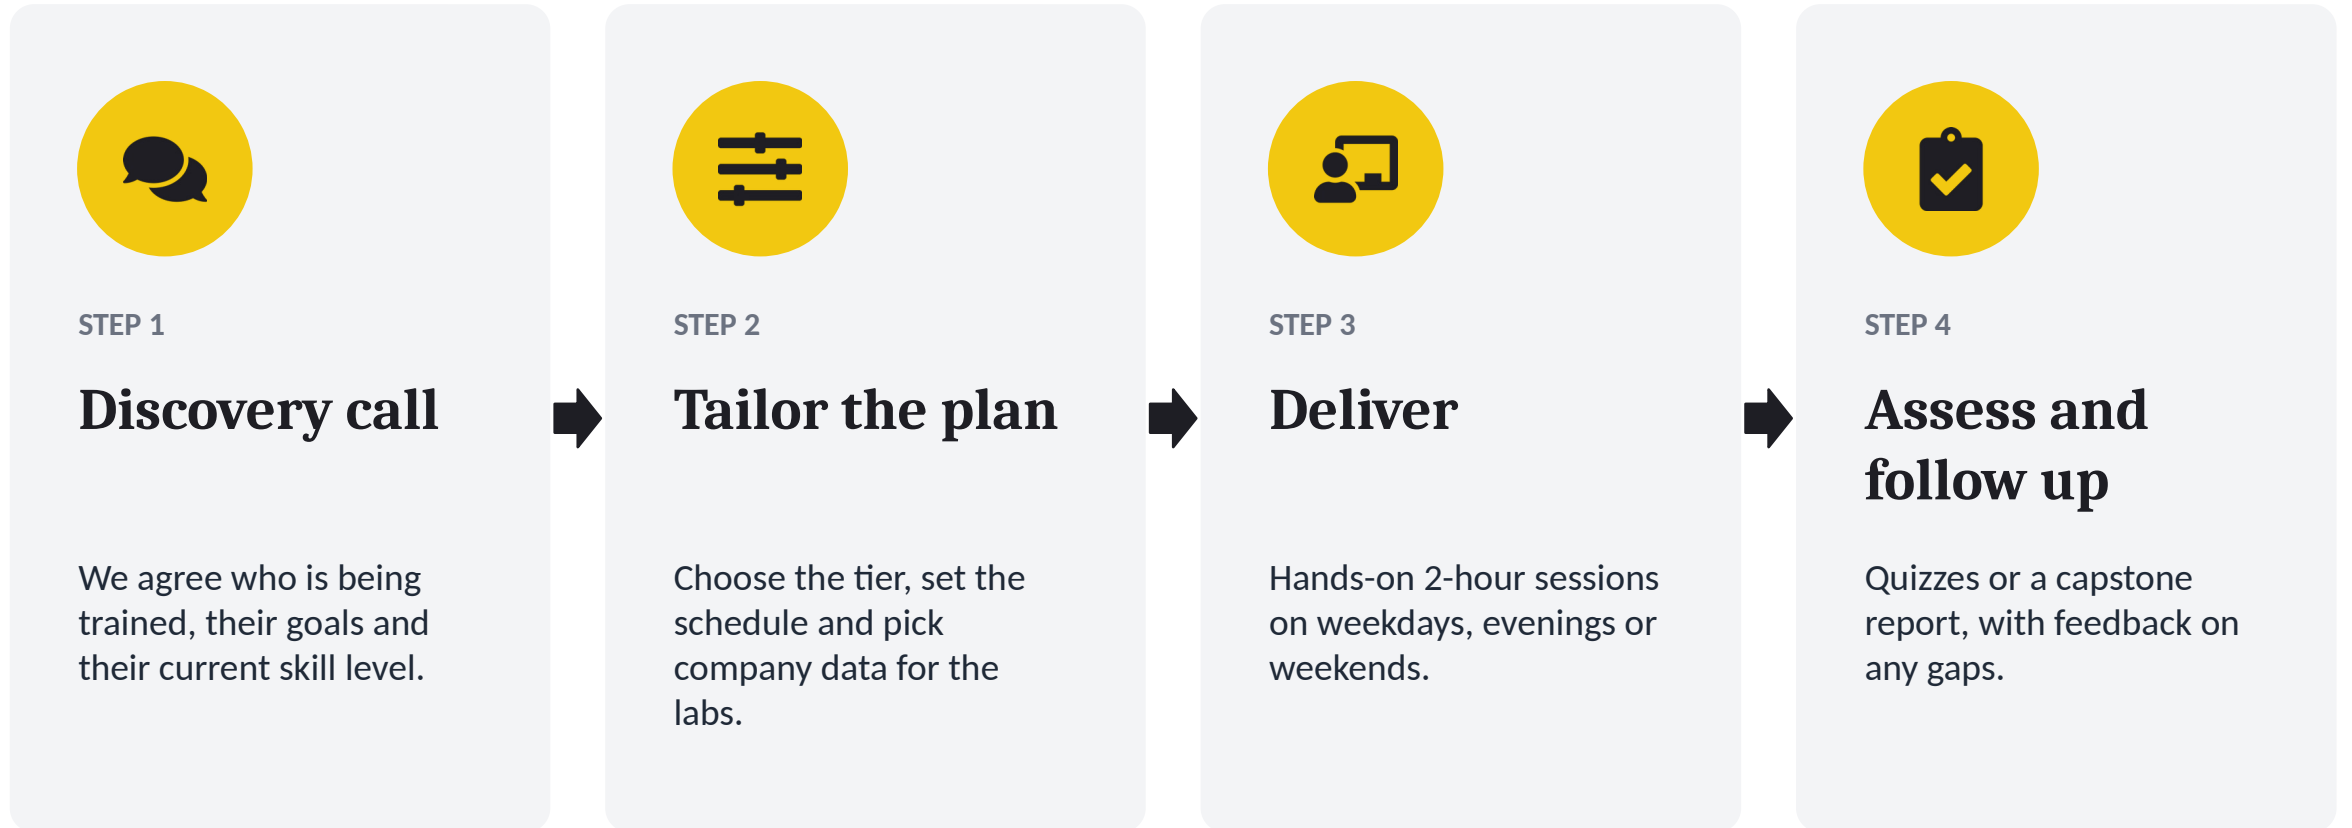

60 hours

30 sessions of 2 hours

- ✓ Labs across all four PL-300 skill areas
- ✓ Module quizzes and progress tracking
- ✓ Optional PL-300 mock exams

Pricing is tailored to team size and schedule. Message me for a quote.

How it works

Scheduling is flexible: weekdays, evenings or weekends.

Ramesh Balami

Power BI Trainer for Teams

Beginner to advanced, on weekdays,
evenings or weekends

Microsoft Certified: PL-300

About the trainer

CERTIFICATION

Microsoft Certified: Power BI Data Analyst Associate (PL-300)

EXPERIENCE

15 years of banking domain experience, 11 of them in data analytics and BI

TOOLS

Power BI (DAX, Power Query), SQL, SAS, Qlik Sense, BigQuery, Advanced Excel

LANGUAGES

English, Hindi, Bengali, Nepali

Let's right-size your team's Power BI training

Message me on this platform and I will recommend the right tier for your team. It helps to include:

Team size and roles

Current Power BI experience

Preferred days and timeline
